Work Experience

Money mul

September 2025 – Present

Software Developer

- Architected and deployed **payment gateway infrastructure** handling high-volume transaction processing with focus on **reliability, security, and scalability**.
- Built **microservices-based architecture** for government digital signature systems, implementing **asynchronous processing** and secure document authentication workflows.
- Designed and implemented **RESTful APIs** for digital stamp ordering platform using Node.js/Express.js with **PostgreSQL** for data persistence and transaction management.
- Deployed applications on **Azure cloud infrastructure**, managing CI/CD pipelines using **CircleCI** for automated testing and deployment.

Innobit Systems

October 2023 – August 2025

Software Developer

- Developed **backend services** using Node.js/Express.js for library management system, integrating with **IoT devices** for real-time visitor analytics and footfall tracking.
- Built **distributed system architecture** with **RabbitMQ** message broker for event-driven communication between microservices, ensuring high availability and fault tolerance.
- Implemented **PostgreSQL database design** with query optimization, indexing strategies, and connection pooling for handling concurrent requests at scale.
- Configured and maintained **cloud infrastructure on Azure**, including monitoring, logging, and performance optimization for production applications.
- Tech Stack:** Node.js, Express.js, PostgreSQL, RabbitMQ, Azure, Docker, CircleCI, React.js, Redux Toolkit

Projects

Project: Blog App

[Demo](#)

- Built a dynamic and responsive blog application using Next.js, supporting server-side rendering and routing.
- Implemented features for viewing blog lists, reading full posts, and navigating through content with clean UI.
- Integrated adding new blog posts with a form-based UI (Add Blog feature).

Project: An API Authentication

[Source Code](#)

- A Node.js API that handles authentication in any application using JWT for secure user verification.
- Implemented MongoDB as database with Mongoose for schema modeling, bcryptjs for password hashing, and JWT for protecting private routes.

Technical Skills

Languages: JavaScript/TypeScript, Node.js (Backend focus), SQL
Cloud & Infrastructure: Azure, AWS, Kubernetes (learning), Docker, CircleCI, Terraform
Databases & Message Queues: PostgreSQL, MongoDB, MySQL, RabbitMQ, CouchDB
DevOps & Monitoring: Postman, GitHub, BitBucket, Azure DevOps, CircleCI
Backend & APIs: Node.js, Express.js, RESTful APIs, JWT, Socket.IO (real-time systems)
Frontend: React.js, Next.js, Redux Toolkit

Achievements

- Solved 250+ data structures and algorithms (DSA) problems on platforms like LeetCode and GeeksforGeeks (GFG).
- Earned the Achiever Badge on Coding Ninjas in topics like Linked List and Arrays.
- Completed 100 Days of Code challenge on LeetCode in 2022.
- Earned 5 Star Badge in Problem Solving on HackerRank.

Education

Inderprastha Engineering College, Ghaziabad (2020 - 2024)

B.Tech in Information & Technology

8 CGPA
